

Trip Report — Michigan: Great Lakes Grandeur 2026

May 13-21, 2026 with Cory Gregory

Bobolinks were an absolute favorite of many of us and we got to enjoy them many times. Here's one in full song at the Allegan State Game Area. Photo by guide Cory Gregory.

The Great Lakes State means a lot to me as a birder, but also as a person who spent a lot of time growing up there. In fact, returning to my former haunts is always a highlight of my year. With such a wide array of unique habitats, Michigan is an exceptional place to visit for birding, both to witness the spectacle of migration and to see all the breeding species as well. From the hardwood swamps, deciduous forests, grasslands, sand dunes, beaches, Jack Pine forests, boreal forests, to the northern bogs, you can start to see the potential Michigan has! Our trip together visited all of these habitats and we came away with an equally impressive collection of birds. It's not every

day that you can top 200 species in the Midwest (including a whopping 33 species of warblers!).

We started our adventure in the southwest corner of the state in Berrien County, where I grew up. The highlights were many, but some that come to mind include starting the trip with displaying American Woodcocks right outside our hotel! We visited a number of birding hotspots that first day, including Warren Dunes State Park where we added 25+ species of warblers right off the bat! We ventured into some really neat habitat, including the dune blowouts, to add the special Prairie Warbler. We visited some lowland forest to add to our warbler list, ticking both Louisiana Waterthrush and Yellow-throated Warbler. We closed out the day with a visit to the Lake Michigan shoreline, took some pics of a lighthouse, and made our way up to South Haven.

Blackburnian Warblers were a near constant for us which was never a bad thing! This nice pic was taken by participant Marsha Hand.

Switching gears, the next morning we birded in some open country around the Allegan State Game Area. We watched some neat shorebirds, including a Wilson's Phalarope, in a roadside pond, listened to the Soras calling, watched the Bobolinks singing overhead, and even got great views of a Grasshopper Sparrow. The Orchard and Baltimore orioles were giving great side-by-side views and the nearby Eastern Meadowlarks sang from the fields. We went back to some lowland forest at that point to check off another several key warblers, the beautiful Prothonotary Warbler and the

light-blue Cerulean Warbler! We had just about reached 30 warbler species and it was only our second day! Next on our agenda was birding the vast Muskegon Wastewater Facility. These were no joke, they're huge! We added heaps of new trip birds including a variety of ducks and shorebirds. A beautiful breeding-plumaged Bonaparte's Gull was a nice surprise, as were more Wilson's Phalaropes, and even some out-of-season ducks like Canvasback. The rest of that day we spent making our way north to the city of Gaylord.

Spruce Grouse was a major target and although it took a lot of work, we were eventually rewarded with this lovely male! Photo by guide Cory Gregory.

Today had one primary goal, and that was to see the one-and-only Kirtland's Warbler. We started by exploring around Grayling and actually found a Kirtland's before I even expected! The loud song of this big warbler filtering through the Jack Pines is exactly what we wanted to hear. The views we got of this special warbler could not have been better! We birded on a nearby road

for some time, which was my go-to spot for some fun breeding species, and sure enough, we added Yellow-bellied Sapsucker, Pine Warbler, Blue-headed and Yellow-throated vireos, Brown Creeper, Ovenbird, Hermit Thrush, and others. Later that morning, we birded some lakes and enjoyed Black Tern, nesting Osprey, and some more warblers. After our lunch in the little diner, we explored the beautiful old-growth forest at Hartwick Pines State Park.

The next day had more adventures and more new country to visit and different habitats to bird in. We made our way up to the Mackinac Straits and enjoyed a slug of migrants right at the tip of the Lower Peninsula as they got ready to cross. The trees were dripping with Blackburnian Warblers, which is never a bad thing! Once in the U.P., we made our way to some open country to track down, hopefully, our first grouse of the trip. Found them! Sharp-tailed Grouse. Would we complete the trifecta and find the other two? Later that morning, we birded at the Munuscong Potholes and took a stroll out along the Munuscong River. Bobolinks gave their R2D2 song, Common Yellowthroats sang from the veg, and a trio of Upland Sandpipers stood nearby. After some lunch in Sault St. Marie, we wound our way along Whitefish Bay to Iroquois Point. Brr! We finished off the day by driving up to Paradise and out to Tahquamenon Falls State Park. We found our second grouse, a beautiful Ruffed Grouse, but where was that darn Spruce?

Another of the many warblers we tallied was the beautiful Cerulean Warbler. We even saw them lower down for good views, not in a treetop. Photo by guide Cory Gregory.

We woke up in our rooms that faced Whitefish Bay... but it was pretty foggy and chilly out. We bundled up, but didn't get far before we ended up with some nice birds, a flock of Evening Grosbeaks were essentially in the parking lot! We then drove up to the tip of the famed Whitefish Point where we spent most of the morning. We started by visiting the feeders where dozens of sparrows and others mobbed for the food. That Snowshoe Hare was pretty cool too! We then walked out to the waterbird shack and then the beach to enjoy an adorable pair of Piping Plovers. Back inland, up at the hawk platform, the fog was starting to burn off and the migrating raptors started to lift off. What a show unfolded in front of us! Dozens (hundreds?) of raptors started to swirl around, all different sorts too, Bald Eagle, Northern Harrier, Merlin, American Kestrel, Sharp-shinned, Red-tailed, Broad-winged, even a Swainson's Hawk made an appearance. We can't forget the Blue Jays though; huge flocks of these started to swarm, and pondered crossing over to Canada. Later that afternoon, we visited Tahquamenon Falls during the

day and enjoyed a lovely stroll to the Upper Falls. The Northern Parula gave quite a show as did the feisty Black-throated Green Warblers. After dinner, we needed to try for Spruce Grouse just one more time. And, wouldn't you know it, there it was on the shoulder of the road, a male Spruce Grouse! Whew! Very happy with completing the trifecta, the drive back to town was a happy one... but then it just turned to dumbfounded... Black Bear on the right! Not only did we get to see this full-size predator, we even watched as it stood on its hind legs and scratched on a pole. We couldn't believe our eyes! Could the night get any better? As it happens, it could. We went up to the Friends of Whitefish Point banding station late that night and got to watch researchers with a Northern Saw-whet Owl. A huge thanks to Chris and Nova for letting us watch them do their thing and to answer all our questions.

Spotting this Common Nighthawk wasn't too hard once you knew where it was. But, before that, it blended in surprisingly well. Photo by participant Pam Pappone.

Sadly, we had to pack up and depart our beachside hotel that next day and leave the Upper Peninsula altogether. However, we had one last birding stop, right before the bridge, at Pointe LaBarbe. And wow, things were going off. Warblers being seen left and right, all sorts, probably close to 20 species! The most exciting among them was a beautiful Mourning Warbler that actually afforded views. But we still needed Orange-crowned Warbler... and then an Orange-crowned showed up. Even some Black-throated Blue Warblers got in on the action. Eventually, the fog started to clear and we got a view of the Mighty Mac just before we had to load up and cross over it, back to the Lower Peninsula. Nearby, we enjoyed an Olive-sided Flycatcher and gorgeous Golden-winged Warbler as it sang over its territory, what a spiffy bird! We drove our way down to Tawas Point where we'd spend the next two nights. A little intro outing at the state park was enough to whet our appetite.

One of the targets was of course the rare Kirtland's Warbler. Not only did we get to listen to them singing and enjoy exploring their interesting habitat, we also saw them REALLY well. Photo by guide Cory Gregory.

We had this full day to explore Tawas Point State Park and the surrounding habitats. We started by walking out to the point early that morning and it didn't take long for us to realize there were loads of migrant warblers around! A Golden-winged Warbler sang from a thicket before we could even start down the trail! Over the course of the next several hours, we explored the point on foot, seeing what migrant birds might drop in. We started to amass a pretty nice warbler list including Blackburnian, Tennessee, Nashville, Cape May, Magnolia, Chestnut-sided, Black-throated Blue, Pine, Palm, and Canada. Vireos were in top form too, and we added the tricky Philadelphia Vireo in addition to Eastern Warbling, Red-eyed, and Blue-headed vireos. We watched as a Common Nighthawk took a snooze on a branch (and a North American Porcupine almost in the same tree!), watched overhead as Purple Martins and various raptors flew over, checked the beach and tallied shorebirds like Sanderling, Dunlin, Black-bellied Plover, Semipalmated Plover, and a flock of Hudsonian Whimbrels. After 3-4 hours of Tawas Point, our list was at about 80 species. That afternoon we visited Tuttle Marsh and got to watch an American Bittern feast on all manners of swamp critters. We even got to hear the local celebrity, the King Rail, calling incessantly. That evening, the marsh was alive with the bugling of Trumpeter Swans, Common Nighthawks swooping overhead, various frogs calling, while the nearby forests delivered a pair of tame Barred Owls and a distant Eastern Whip-poor-will singing deep in the forest.

We had just found the Spruce Grouse a few minutes earlier when, all of a sudden, we couldn't believe our eyes. Black Bear! And then it stood up and started scratching its back. Unbelievable! Photo by guide Cory Gregory.

Our final day started with us driving to Nayanquing Point. It was cold! We did eke out a new American Wigeon though, heard some Marsh Wrens chattering in the cattails, and watched a Common Gallinule back in the reeds. We stopped once more at a lovely park for a short stroll before making our way back to Grand Rapids.

I want to thank all of you for joining me in Michigan on this Field Guides trip. I certainly enjoyed it and am happy to say that this was maybe the most successful Michigan tour I've ever run! Thank you all. I hope to see you again on another trip down the road. Until then, good birding.

One of the participants took this amazing photo showing the Mackinac Bridge rising up out of fog.

Some other critters we encountered:

Eastern Cottontail (*Sylvilagus floridanus*) - Common throughout.

Snowshoe Hare (*Lepus americanus*) - Great views at Whitefish Point.

Eastern Chipmunk (*Tamias striatus*) - Common

Woodchuck (*Marmota monax*) - Success in finding this "Eastern Marmot".

Eastern Gray Squirrel (*Sciurus carolinensis*) - Common

Eastern Fox Squirrel (*Sciurus niger*) - Common

North American Red Squirrel (*Tamiasciurus hudsonicus*) - Common

North American Porcupine (*Erethizon dorsatum*) - Finally, saw a sleeping one at Tawas Point.

American Black Bear (*Ursus americanus*) - Incredible! What a show just outside of a Paradise.

White-tailed Deer (*Odocoileus virginianus*) - Common

Green Frog (*Lithobates clamitans*)

Common Garter Snake (*Thamnophis sirtalis*)

Painted Turtle (*Chrysemys picta*)

Common Snapping Turtle (*Chelydra serpentina*)
