The Canopy Tower trip never disappoints, and this year was no exception. We had some nice weather and cooperative birds, plus a whole host of other interesting critters to keep us enthralled. While we saw many wonderful mammals, none are more memorable than Elvis, the Crab-eating Raccoon that spent some time with us on a couple of days. Also, our Summit Road Three-toed Sloth encounter was something I'll not soon forget. We had some great sightings. The Rothchild's Porcupine, three species of monkeys, some big crocodiles, and a couple of great snakes (Brown Vine Snake and the Green Parrot Snake) within a few minutes of one another. But birds did take center stage, and there were many favorites among the more than 200 species we saw over the course of the trip. Two species of forest-falcon topped the voting, with Slaty-backed being the top vote getter. Other multi-vote getters included Pheasant Cuckoo (what a display), Pygmy Kingfisher, and the jewel-like Golden-hooded Tanager.

Thanks to all of you for coming along and making this such a terrific trip. It was great to bird with all of you and I look forward to our next opportunity. Until then, safe travels and great birding! -- Chris
