Trip Report — Peruvian Rainforests of the Tambopata: Macaw Lick Extraordinare 2026

July 20-30, 2026 with Dan Lane & Jair Moriche

Bill Clark captured this colorful image of the parrots at the clay lick.

I have been hearing about the Tambopata region and its ecological riches for decades, so it was wonderful, finally, to see them for myself. Emerald forests, the rolling river, an oxbow lake inhabited by giant otters, an immense bank along the river that provides clay for hundreds of parrots and macaws, canopy towers, and comfortable lodging with great food! Not much more one can ask when visiting the Amazon. We visited three lodges along the Tambopata River, starting with Pousada Amazonas nearest to Puerto Maldonado, then the legendary Tambopata Research Center (TRC), and

finally Refugio Amazonas, before returning to civilization. Each had its own flavor and reasons to visit. For many of you, the main attraction was the clay lick and seeing the rainbow of parrots, but other characters of Amazonia also got ranked as favorite memories. I am thankful for the care and professionalism of our local guide, Jair, and Rainforest Expeditions for making all the arrangements for our visit! The quality of service and the amazing meals we enjoyed in the three lodges was of the highest caliber.

Here, the group is viewing the clay lick. Photo by Dan Lane.

This region is nestled into the southwesternmost of lowland Amazonia, not far from where the Andes mountains bend from running the longitude of Peru to going east into Bolivia. The overall diversity of birdlife here is massive, as revealed by a baseline birdlist of nearly 500 species! Much of this is due to the close-packing of many microhabitats in this corner of Amazonia, with seasonally flooded (as we got to see firsthand!) riverine forest, higher

terraces of terra firme forest, younger island vegetation, vine tangles along the trunks and branches of the neck-breakingly tall forest trees, the patches of Guadua bamboo, treefall gaps, lake-bound marsh and lakeshore habitats, and much more. Each of these provides niches for the many species of birds present in the area... and of course other plant and animal groups also benefit from the heterogeneity of the environment. The number of monkeys further speak to this diversity, and even a smattering of more secretive species such as snakes, frogs, and other herps, and the wide array of insects, all were sources of wonder.

Super-Spider Monkey is off to save its people, awaaaayyyyyy! Participant Bill Clark got this one in mid-leap between trees.

Each of us has specific top memories that we made on the tour. For many, the parrot lick was top-tier, but other experiences that made it up there were simply observing birds that we'd only heard or read about previously. The

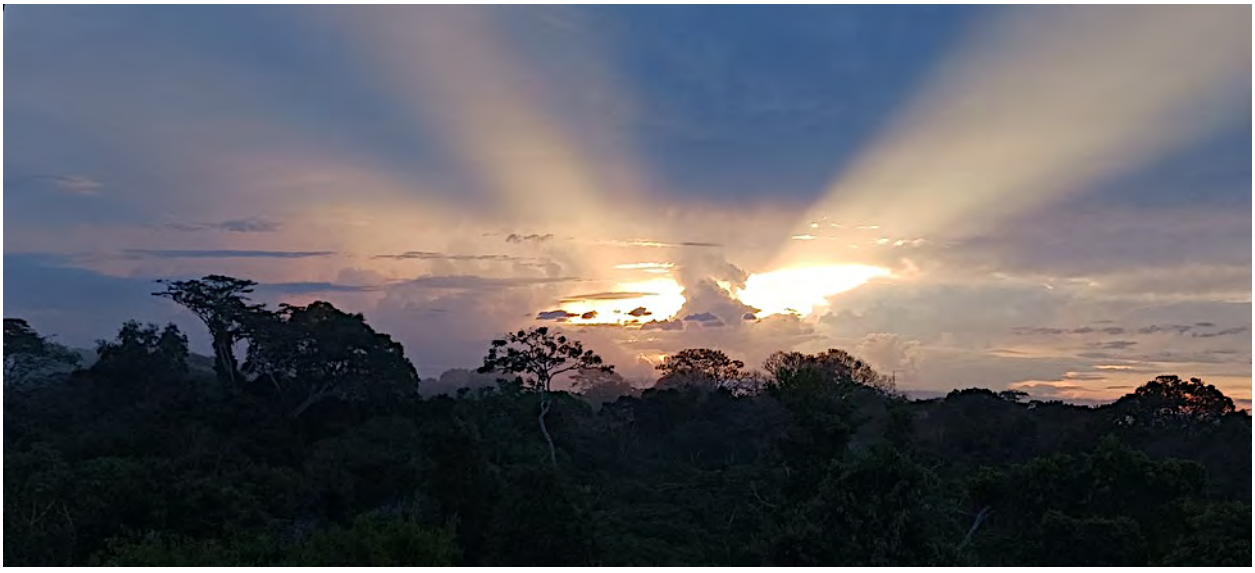

machete trail-cutting on the river island and the oxbow lake raft ride were also experiences that were seared in our minds. Mammals, such as the bathroom break by the Red Howlers, or the cable climbing troop that roosted on the defunct tower next to ours, or the allopreening Toppin's Titi Monkeys, or the close encounter with family of giant otters were mentions on our list. Birds figured too, of course, including large ones such as the Great Tinamou we spied next to us along the forest path that refused to flush (!), the Razor-billed Curassow that happily wandered the TRC grounds as it rained, the gang of Pale-winged Trumpeters that showed no fear as they foraged around Pousada Amazonas, and the goofy Hoatzins that we admired as they moved along the lakeshore vegetation. We enjoyed a few very colorful tropical birds such as the curious Curl-crested Aracari, the distantly related Scarlet-hooded Barbet (I mean, this one I can understand!), the lovely Orange-cheeked Parrots that came down to the small lake at Pousada Amazonas, or the diminutive male Round-tailed Manakin that we saw on his lek perch. Some folks even found less colorful birds as memorable, with birds such as the small White-eyed Stipplethroat that sang from just over our heads, the amazing mimicry of a Lawrence's Thrush that we were able to watch at length, or (one that I particularly enjoyed) a pair of Rufous-tailed Xenops that gave us a great show from the tower at Refugio Amazonas. These were just some of the over 300 species we enjoyed on the tour! That's a lot of birds!

A surprising find was this quiet Great Tinamou, photographed here by Kevin Watson!

Participant Kevin Watson got this photo of a group of Giant Otters at the oxbow lake.

This Hoatzin photo was taken by participant Kevin Watson (no relation).

Mammals observed:
Weddell's Saddle-back Tamarin (Saguinus weddelli)
Black-capped Squirrel Monkey (Saimiri boliviensis)
Toppin's Titi (Plecturocebus toppini)
Bolivian Howler (Alouatta sara)
Brown Capuchin (Sapajus apella)
Black Spider Monkey (Ateles chamek)
Brown-throated Three-toed Sloth (Bradypus variegatus)
Greater Capybara (Hydrochoerus hydrochaeris)
Brown Agouti (Dasyprocta variegata)
Kinkajou (Potos flavus)
Giant Otter (Pteronura brasiliensis)

Herps observed:
Spot-legged Poison Frog (Ameerega picta)
Spectacled Caiman (Caiman crocodilus)

Black Caiman (Melanosuchus niger)
Yellow-spotted River Turtle (Podocnemis unifilis)
Green Jararaca (Bothrops bilineatus)

It was a pleasure to visit the Tambopata area with you all, and I hope we get to bird another exciting Field Guides tour in the near future! Until then, keep them binos at hand and adventure in your heart! Good birding!
